

Lab direct qPCR

Our EU-IVDR certified, multiplex qPCR kits simplify detection of up to four different targets in a single reaction. They are provided as ready-to-use solutions, simply:

1. Perform RNA/DNA extraction
2. Add the eluate(s) and controls to the plated reaction mix (solution A)
3. Run the assay on any qPCR cyclers and obtain your results

Lab *direct* qPCR kits are available in multiple instrument configurations to ensure optimal compatibility with commonly used real-time PCR platforms and fluorescence channel settings.

The kits require either ≤ 3 detection channels or one of the following channel configurations:

- Ax assays are designed for 5-channel qPCR: **Cyan500**, FAM, HEX, CalRed, Cy5
- Bx assays are designed for 5-channel qPCR: FAM, HEX, CalRed, Cy5, **Cy5.5**
- Cx assays are designed for 4-channel qPCR: FAM, HEX, CalRed, Cy5
